DHIREN POLYMERS

COMPANY PROFILE

P O L Y M E R S

COMPANY PROFILE

2025

OVERVIEW

Dhiren Polymers is a leading manufacturer of plastic houseware and stainless steel products, based in Mumbai, India. With over 27 years of relentless innovation and commitment to quality, the company has grown from humble beginnings to become a recognized name serving both domestic and international markets

Founder - Mr. Dhiren Shah – A visionary businessman who started the company at a young age with no financial backing. Through determination and business acumen, Mr. Shah has transformed Dhiren Polymers into a highly respected player in the industry.

KEY FACTS

Established: 1998

Age: 27 years in operation (as of 2025)

Factory Size: Over 20,000 square feet of company-owned infrastructure.

Production Units: 8 units located in Vasai, Maharashtra.

Production Capacity: 5 containers per month.

Machinery: 4 advanced manufacturing machines in operation.

In-house Moulds: Complete in-house mould making capability for maximum product customization and quality control.

Certifications: BIS certification for quality management.

Exports: Products are distributed both locally and internationally.

Product Range: Includes casseroles, insulated tiffins, lunch boxes, water bottles, serving trays, pet jars, and microwave-safe ware, all designed to international standards

MILESTONES:

1998: Company founded by Dhiren Shah in Mumbai.

Early 2000s: Expanded product portfolio with a focus on quality and design, establishing initial market presence

2010s: Acquisition of additional manufacturing units and scaling up production capabilities.

2025: Boasts over 20,000sqft of production space with eight units in Vasai, robust in-house tooling and moulding facilities, and regular export shipments.

VISION & MISSION

Vision:

To secure customer confidence by delivering immaculate, long-lasting, eco-friendly, and stylish household products. -

Mission:

To expand reach both locally and internationally, becoming the largest consumer products company in its category.

STRENGTHS:

Innovation: All moulds and tooling are handled in-house, offering flexibility, speed, and unmatched product quality.

Capacity: The facility is equipped to produce up to 5 containers of finished goods per month.

Workforce: Supported by a veteran team of professionals and modern technological infrastructure.

Global Reach: Serves both Indian and international markets with customized and bulk orders

ACHIEVEMENTS

- Grew from a single small facility to a large-scale enterprise with eight production units.
- Gained BIS certification, proving commitment to international standards.
- Developed an extensive catalogue of over a dozen product lines in premium plastics and stainless steel.

Dhiren Polymers stands as a testament to visionary entrepreneurship, sustained by quality, reliability, and a passion for customer satisfaction. The company continues to invest in people, infrastructure, and innovation, ensuring it remains at the forefront of its industry

QUALITY CONTROL MEASURES

Dhiren Polymers implements a comprehensive and multi-layered quality control system to ensure that all its products consistently meet international standards. Here's a detailed breakdown of their quality control measures.

1. Raw Material Inspection-

- All incoming raw materials—plastics and stainless steel—are checked for compliance with food-grade safety standards (e.g., BPA-free, food contact safe).
- Materials are tested for purity, physical properties, and absence of contaminants before processing begins

2. In-House Tooling & Mold Validation-

As all molds are designed and manufactured internally, each new mold undergoes trial runs and inspection for dimensional accuracy, surface quality, and product fit.- Sample products from new or serviced molds are checked thoroughly before full production ramps up

3. In-Process Quality Checks- At every stage—melting, molding, demolding, assembly—operators and supervisors conduct real-time inspections.- Key dimensions, proper ejection, absence of warping, color

consistency, and clarity (for PET jars/bottles) are monitored continuously.- Automated and manual checks are performed for each batch, ensuring prompt detection of any discrepancies

4. Post-Molding Evaluation- Products are visually and mechanically inspected for signs of flashing, incomplete filling, bubbles, or surface defects.- Stainless steel parts undergo additional checks for weld integrity, smoothness, and finish quality.

6. Certification and Documentation- Dhiren Polymers is certified with BIS certification, reflecting systematically documented process control, traceability, and corrective action protocols.- Each stage—from raw material intake to dispatch—is logged, allowing for complete traceability and efficient recall management if needed

7. Final Quality Assurance & Packaging- Before products are packaged, dedicated teams perform final inspections for appearance, branding accuracy, and overall finish.- Only products passing all checks are packed and readied for shipment; defective items are isolated and reworked or rejected.

8. Continuous Training & Process Improvement- Supervisors and production staff receive ongoing training in the latest quality assurance procedures.- Regular audits, customer feedback loops, and process reviews drive continual improvement in manufacturing quality and efficiency

9. Customer Feedback and After-Sales Support- The company monitors complaints and product returns for root cause analysis and preventive measures, further reinforcing its commitment to long-term quality excellence.

SUMMARY

The quality control at Dhiren Polymers is built into every step of the manufacturing chain, from material sourcing to final packing, with multiple checkpoints,
